Pulmonary Physiology and Pathophysiology

An Integrated, Case-Based Approach

Second Edition

JOHN B. WEST

Contents

Preface to the First Edition.....v	
Preface to the Second Edition.....vii	
Chapter 1	
Normal Physiology: Exercise.....1	
<i>Oxygen Consumption</i> □ <i>Respiratory Muscles</i>	
□ <i>Airways</i> □ <i>Diffusion across the Blood-Gas Barrier</i>	
□ <i>Introduction to the Pulmonary Circulation</i>	
□ <i>Cardiac Output</i> □ <i>Carriage of Oxygen and Carbon Dioxide by the Blood</i> □ <i>Blood-Tissue Gas Exchange</i>	
Chapter 2	
Normal Physiology: Hypoxia.....15	
<i>Oxygen Cascade from Air to Tissues</i> □ <i>Effects of Reduced Barometric Pressure</i> □ <i>Alveolar Ventilation Equation</i> □ <i>Alveolar Gas Equation</i> □ <i>Hyperventilation</i>	
□ <i>Acid-Base Changes, Including Respiratory and Metabolic</i> □ <i>Control of Ventilation, Including Respiratory Center, Central and Peripheral Chemoreceptors, and Integrated Responses</i>	
Chapter 3	
Chronic Obstructive Pulmonary Disease.....31	
<i>Clinical Features of a Typical Case</i> □ <i>Pulmonary Function Tests</i> □ <i>Pathology of COPD</i> □ <i>Lung Volumes</i>	
□ <i>Pressure-Volume Curve of Lung</i> □ <i>Regional Differences of Ventilation</i> □ <i>Forced Expiration</i>	
□ <i>Dynamic Compression of Airways</i> □ <i>Ventilation-Perfusion Inequality</i> □ <i>Pathogenesis of COPD</i>	
Chapter 4	
Asthma.....53	
<i>Clinical Features of a Typical Case</i> □ <i>Pathology of the Airways</i> □ <i>Gas Exchange</i> □ <i>Airflow in the Lung</i>	
□ <i>Convection and Diffusion</i> □ <i>Pressures during the Breathing Cycle</i> □ <i>Factors Determining Airway Resistance</i> □ <i>Uneven Ventilation</i> □ <i>Pathogenesis of Asthma</i> □ <i>Principles of Bronchoactive Drugs</i>	
Chapter 5	
Diffuse Interstitial Pulmonary Fibrosis.....67	
<i>Clinical Features of a Typical Case</i> □ <i>Pathology</i>	
□ <i>Structure of the Alveolar Wall</i> □ <i>Reduced Lung Volumes and Compliance</i> □ <i>Diffusion across the Blood-Gas Barrier</i> □ <i>Diffusing Capacity for Carbon Monoxide</i> □ <i>Reaction Rates with Hemoglobin</i>	
Chapter 6	
Pulmonary Embolism.....79	
<i>Clinical Features of a Typical Case</i> □ <i>Pathogenesis</i>	
□ <i>Physiology of the Pulmonary Circulation</i>	
□ <i>Pulmonary Vascular Resistance</i> □ <i>Distribution of Blood Flow</i> □ <i>Active Control of the Circulation</i>	
□ <i>Metabolic Functions of the Circulation</i> □ <i>Surface Tension and Surfactant</i>	
Chapter 7	
Pulmonary Edema.....94	
<i>Clinical Features of a Typical Case</i> □ <i>Pathophysiology of Pulmonary Edema</i> □ <i>Starling Equilibrium</i> □ <i>Causes of Pulmonary Edema</i> □ <i>Hypoxemia Caused by Shunt</i>	
□ <i>Measurement of Shunt by Oxygen Breathing</i>	
Chapter 8	
Coal Workers' Pneumoconiosis.....105	
<i>Clinical Features of a Typical Case</i> □ <i>Atmospheric Pollutants</i> □ <i>Deposition of Aerosols in the Lung</i>	
□ <i>Clearance of Deposited Particles</i> □ <i>Other Pneumoconioses and Related Conditions</i>	
Chapter 9	
Acute Respiratory Failure.....116	
<i>Clinical Features of a Typical Case</i> □ <i>Pathophysiology of Respiratory Failure</i> □ <i>Hypoxemia</i> □ <i>Carbon Dioxide Retention</i> □ <i>Acidosis</i> □ <i>Diaphragm Fatigue</i> □ <i>Types of Respiratory Failure</i> □ <i>Adult Respiratory Distress Syndrome</i> □ <i>Oxygen Therapy</i> □ <i>Mechanical Ventilation</i>	
Chapter 10	
Other Diseases.....134	
<i>Infectious Diseases of the Lung, Including Pneumonia, Tuberculosis, and Pulmonary Involvement in AIDS</i>	
□ <i>Bronchiectasis</i> □ <i>Bronchial Carcinoma</i>	
□ <i>Cystic Fibrosis</i>	
Appendix A	
Symbols, Units, Equations, and Normal Values.....139	
Appendix B	
Answers to Questions.....142	
Figure and Table Credits.....143	
Index.....145
