SERIES EDITOR: LISA MARCUCCI, MD

CONTENTS

PREFACE	vii
FOREWORD	ix
ACKNOWLEDGMENT	xi
CONTRIBUTORS	xiii

AIRWAY AND VENTILATION 0

Basics:

- | | | |
|----------|--|----|
| 1 | NEVER neglect the basics of airway management
<i>Adam D. Niesen, MD and Juraj Sprung, MD, PhD</i> | 2 |
| 2 | Basics of Airway Management—Part II (Tips and Tidbits)
<i>Catherine Marcucci, MD and Nabil M. Elkassabany, MD</i> | 7 |
| 3 | Consider PEEP <i>Andrea Y. Tan, MD and
Ibtisam A. Hilmi, MB, CHB, FRCA</i> | 10 |

Advanced:

- | | | |
|----------|--|----|
| 4 | A variety of techniques provide acceptable anesthesia for awake
intubation of the airway; ultimately, the most important factors
are operator experience and adequate time
<i>Chauncey T. Jones, MD</i> | 16 |
| 5 | An awake intubation should not be a traumatic experience for the
patient <i>Chauncey T. Jones, MD</i> | 22 |

Special Cases:

- | | | |
|----------|---|----|
| 6 | A high inspired concentration of oxygen is contraindicated in
certain circumstances <i>Xianren Wu, MD and
David G. Metro, MD</i> | 26 |
| 7 | Understand and take advantage of the unique properties of helium
for the management of the compromised airway
<i>J. Mauricio Del Rio, MD and Theresa A. Gelzimis, MD</i> | 31 |
| 8 | Remember that there are special considerations involved with
both intubation and chronic airway management of burn patients
<i>Marisa H. Ferrera, MD and Shushma Aggarwal, MD</i> | 38 |

9	Consider the use of lidocaine in the cuff of the endotracheal tube, but be aware of the risks and alternatives <i>Jamey E. Eklund, MD and Paul M. Kempen, MD, PhD</i>	43
	Problem solving:	
10	Always troubleshoot an increase in peak airway pressure <i>Adam D. Niesen, MD and Juraj Sprung, MD, PhD</i>	49
11	Avoid common airway and ventilation errors in morbidly obese patients <i>Francis X. Whalen, Jr., MD and Juraj Sprung, MD, PhD</i>	54
12	Plan for an airway fire with every head and neck case <i>Julie Marshall, MD</i>	58
13	Know how to perform a cricothyroidotomy <i>Lisa Marcucci, MD and Hilary Koprowski, II, MD</i>	62
	Don'ts:	
14	Do not overinflate the cuff of the endotracheal tube <i>J. Todd Hobelmann, MD</i>	64
15	Don't under represent the risks associated with the use of a laryngeal mask airway <i>Surjya Sen, MD</i>	67
16	Do not be intimidated by the placement and use of double-lumen endotracheal tubes <i>Jay K. Levin, MD</i>	71
17	Do not underestimate the difficulty of reintubating a patient who has undergone carotid endarterectomy or cervical spine surgery <i>Heath R. Diel, MD and Randal O. Dull, MD, PhD</i>	75
18	Do not start the airway management of a Ludwig angina patient until personnel and equipment for a definitive (surgical) airway are assembled <i>Anne L. Lemak, DMD and Todd M. Oravitz, MD</i>	79
	LINES AND ACCESS	84
	Basics:	
19	Remember that the IV start is your first chance to make a favorable impression on the patient <i>Hassan M. Ahmad, MD and Catherine Marcucci, MD</i>	86
20	Never use an intravenous line without palpating and inspecting it visually <i>Ryan C. McHugh, MD and Juraj Sprung, MD, PhD</i>	90

21	Use of ultrasound guidance for cannulation of the central veins improves success rates, decreases number of attempts, and lowers complication rates <i>Michael Aziz, MD</i>	94
	Central Lines:	
22	Central line placement: never neglect the basics <i>Hassan M. Ahmad, MD</i>	97
23	Approach the use of a pulmonary artery catheter with caution <i>Amy V. Isenberg, MD</i>	100
24	Avoid technique-related central venous catheter complications by using modern tools <i>J. Saxon Gilbert, MD and Karen Hand, MD</i>	106
	Don'ts:	
25	Don't overflush lines <i>Julie Marshall, MD and Peter Rock, MD, MBA</i>	109
26	Do not use the subclavian vein for central access of any type in a patient planned for dialysis <i>Michael J. Moritz, MD and Catherine Marcucci, MD</i>	112
	Errors:	
27	Remember that inadvertent intra-arterial injection is not rare <i>Michael S. N. Hogan, MB, BCh, Surjya Sen, MD, and Juraj Sprung, MD, PhD</i>	114
28	Avoid errors in invasive blood pressure measurement <i>Michael S. N. Hogan, MB, BCh and Juraj Sprung, MD, PhD</i>	120
29	Remember that loss of a patent hemodialysis fistula in the perioperative period is a serious event for the patient and requires immediate communication with the surgeons <i>Anagh Vora, MD and Steven J. Busuttill, MD, FACS</i>	125
	FLUIDS, RESUSCITATION, AND TRANSFUSION	130
	Fluids:	
30	Hypertonic saline: the "solution" to the solution problem? <i>Lavinia M. Kolarczyk, MD and Patrick J. Forte, MD</i>	132
31	Remember that the synthetic colloid solutions have distinct properties and risk/benefit ratios <i>Ivan V. Colaizzi, MD and Raymond M. Planinsic, MD</i>	136

Resuscitation:

- 32 Protect the kidneys, not the "UOP"
Michael P. Hutchens, MD, MA..... 142
- 33 Do not treat lactic acidosis with bicarbonate
Prasert Sawasdiwipachai, MD..... 145
- 34 Consider the use of tris-hydroxymethyl aminomethane (THAM) to treat refractory or life-threatening metabolic acidosis
Leander L. Moncur, MD and Elliott R. Haut, MD, FACS 147
- 35 Use the principles of "damage control anesthesia" in the care of the massively bleeding patient and ask the surgeons to implement "damage control surgery" if necessary
T. Miko Enomoto, MD and Michael P. Hutchens, MD, MA..... 150
- 36 Learn from the care of the combat victim: ask the surgeons to consider damage control surgery for the bleeding patient
Surjya Sen, MD..... 153

Transfusion:

- 37 Know what screening tests are performed on volunteer donor blood
Andrew M. Gross, MD..... 156
- 38 Transfusion of packed red blood cells requires a careful risk-benefit analysis
Heather A. Abernethy, MD and Michael P. Hutchens, MD, MA..... 160
- 39 Jehovah's Witnesses and transfusion: ethical issues
Rose Christopherson, MD, PhD..... 164

MEDICATIONS 168**Perioperative issues:**

- 40 Beware of the mechanical bowel prep
James C. Opton, MD..... 170
- 41 Beware of the antibiotic bowel prep
James C. Opton, MD, Richard Botney, MD, and Neil B. Sandson, MD..... 173
- 42 Be aware of the drugs that require slow intravenous administration
Maggie Jeffries, MD and Laurel E. Moore, MD..... 176
- 43 Remember that smoking cessation and re-initiation are important variables in the perioperative period
Neil B. Sandson, MD and Catherine Marcucci, MD..... 180

- 44 Consider insulin therapy to correct perioperative hyperglycemia in both diabetic and nondiabetic patients
Heather A. Abernethy, MD and Serge Jabbour, MD, FACP, FACE..... 183
- 45 Stop metformin before elective surgery or intravascular contrast dye study to decrease the risk of lactic acidosis
Serge Jabbour, MD, FACP, FACE and Michael J. Moritz, MD... 186
- 46 Remember that administration of angiotensin system inhibitors within 10 hours before surgery is a significant independent risk factor for hypotension in the postinduction period
Thomas B. O. Comfere, MD and Juraj Sprung, MD, PhD..... 188
- 47 Be aware that many drugs commonly given in the perioperative period have significant P-glycoprotein transport pump activity
Neil B. Sandson, MD..... 192
- 48 Acknowledge the complex medical and legal issues surrounding off-label drug use *Angela M. Pennell, MD*..... 195
- 49 Remember that the unthinkable *is* possible—follow these principles in the evaluation and treatment of patients suffering from nerve agent poisoning *Daniel J. Bochicchio, MD, FCCP*... 202
- Specific drugs:**
- 50 Use bicarbonate as a buffer to local anesthetics, especially for skin infiltration *Hooman Rastegar Fassaei, MD and Steven L. Orebaugh, MD*..... 210
- 51 Consider perioperative clonidine administration—it has anxiolytic, antiemetic, and analgesic properties
Bryan J. Fritz, MD and Shashank Saxena, MD..... 213
- 52 Consider chloroprocaine for regional blockade when appropriate—it is a rapid-onset local anesthetic with low systemic toxicity *Joshua M. Zimmerman, MD and Randal O. Dull, MD, PhD*..... 218
- 53 Consider using ketamine when appropriate—if managed carefully, the benefits will usually outweigh the potential side effects *Elizabeth E. Costello, MD*..... 222
- 54 Dexmedetomidine can be a useful drug, but will it be universally applicable? *Evan T. Lukow, DO, Miriam Anixter, MD, and Tetsuro Sakai, MD, PhD*..... 228
- 55 Check for history of migraine before giving ondansetron, especially in children *Michael J. Moritz, MD*..... 233

56	Remember that not all blue-colored compounds are the same <i>Chauncey T. Jones, MD</i>	235
57	Do not forget that linezolid is a monoamine oxidase inhibitor (MAOI) as well as an antibiotic <i>Neil B. Sandson, MD</i>	242
58	Be alert for the signs and symptoms of perioperative digoxin toxicity, especially if the patient is at risk for electrolyte depletion <i>Grace L. Chien, MD</i>	245
59	Exercise care in the use of amiodarone and alternative antiarrhythmics for the treatment of atrial fibrillation <i>Muhammad Durrani, MD, Alan Cheng, MD, and Edwin G. Avery, IV, MD</i>	249
60	Use extreme caution when administering milrinone in renal failure <i>Ying Wei Lum, MD and Edward G. Avery, IV, MD</i>	252
61	Use meperidine with caution <i>Neil B. Sandson, MD</i>	254

INTRAOPERATIVE AND PERIOPERATIVE MANAGEMENT 258

Basics:

62	Wash your hands! <i>James W. Ibinson, MD, PhD and David G. Metro, MD</i>	260
63	Never rush through a sign-out <i>John T. Bryant, IV, MD</i>	264
64	Preoperative anxiolysis: It's not just "two of midaz" <i>Michael P. Hutchens, MD, MA</i>	268
65	Recognize that transport is one of the most hazardous intervals in the perioperative period and prepare accordingly <i>Mohammed Ojodu, MD and Charles D. Boucek, MD</i>	272
66	The same simple mistakes at induction (and emergence) happen over and over again—so develop a checklist, and make it ironclad <i>Brandon C. Dial, MD and Randal O. Dull, MD, PhD</i>	276
67	Never fail to report a needlestick injury <i>Vidya K. Rao, MD and Shawn T. Beaman, MD</i>	280

Perioperative Medicine (or "Periop-tology"):

68	Understand the utility of preoperative stress testing in suspected heart disease <i>Matthew V. DeCaro, MD, FACC</i>	286
----	--	-----

- 69 Perioperative beta-blocker therapy is indicated for high-risk patients who are having noncardiac surgery, but specific questions remain unanswered *Esther Sung, MD and Richard F. Davis, MD, MBA*..... 289
- 70 A positive troponin is not necessarily a myocardial infarction *Michael P. Hutchens, MD, MA and Bradford D. Winters, MD, PhD*..... 294
- 71 Do not disregard an elevated partial thromboplastin time when the prothrombin time is normal *Lisa Marcucci, MD*..... 297
- 72 Avoid a 70% mortality rate: do everything you can to prevent perioperative renal failure *Michael P. Hutchens, MD, MA*..... 300
- 73 "Renal dose" dopamine must die *Todd J. Smaka, MD and Michael P. Hutchens, MD, MA*..... 303
- 74 Remember that there are at least seven modalities for treating hyperkalemia in the perioperative period *Grace L. Chien, MD*..... 306
- 75 Manage obstructive sleep apnea patients conservatively *Daniela Damian, MD and Ibtisam A. Hilmi, MB, CHB, FRCA*..... 311
- 76 Have a high index of suspicion for perioperative pulmonary embolism in patients who have traveled to your hospital by air *Abram H. Burgher, MD and Juraj Sprung, MD, PhD*..... 321
- 77 Be aware that schizophrenic patients have greater perioperative risks than age-matched controls *Neil B. Sandson, MD*..... 324
- Special Cases:**
- 78 Use extra care in positioning patients who have had amputations *Carol F. Bodenheimer, MD and Catherine Marcucci, MD*..... 326
- 79 Positioning patients for spine surgery: how to minimize the risks *Ihab R. Kamel, MD, David Y. Kim, MD, and Rodger Barnette, MD, FCCM*..... 328
- 80 Be vigilant during placement of the camera in laparoscopic procedures and always watch carefully for the physiologic effects of carbon dioxide (CO₂) insufflation *Jennifer A. DeCou, MD and Randal O. Dull, MD, PhD*..... 332

- | | | |
|------------------|---|-----|
| 81 | Do not use urine output as an indicator of volume status in hypothermic patients <i>Juan N. Pulido, MD and Daniel R. Brown, MD, PhD</i> | 336 |
| 82 | Anesthesia for eye surgery—The innate culture of “I-N-1” <i>Amit Sharma, MD and Sajeev S. Kathuria, MD, FACS</i> | 339 |
| 83 | Remember that fires in the operating room can be prevented by minimizing just one component of the fire triad
<i>Anne B. Haupt, RN, BSN, CNOR and Catherine Marcucci, MD</i> | 344 |
| 84 | Remember that elevated temperature is a late finding in malignant hyperthermia <i>James C. Opton, MD</i> | 348 |
| 85 | Consider methemoglobinemia after ruling out the common causes for a low pulse oximeter reading
<i>Leena Mathew, MD, Philip Shin, MD, and Walter L. Chang, MD</i> | 353 |
| EQUIPMENT | | 358 |
| Monitors: | | |
| 86 | Pulse oximetry: even a simple device requires user understanding
<i>Jorge Pineda, Jr, MD and Stephen T. Robinson, MD</i> | 360 |
| 87 | The end-tidal CO ₂ monitor is more than just a “the tube is the airway” device
<i>Brian Woodcock, MB, CHB, MRCP, FRCA, FCCM</i> | 365 |
| 88 | Noninvasive blood pressure management—it’s not just a piece of nylon around the arm <i>Jorge Pineda Jr, MD and Stephen T. Robinson, MD</i> | 371 |
| 89 | Don’t let the tourniquet time run long
<i>Byron D. Ferguson, MD and Randal O. Dull, MD, PhD</i> | 376 |
| 90 | Brain function monitors attempt to link an intraoperative measurement with postoperative recall—much is known and more is unknown as definitive practice parameters and “best use” guidelines for these monitors evolve <i>Stephen T. Robinson, MD and Catherine Marcucci, MD</i> | 380 |
| Devices: | | |
| 91 | Do not improvise techniques to warm patients—use warming devices <i>only</i> as per manufacturers’ recommendations
<i>Jeff T. Mueller, MD</i> | 385 |

92	Remember that the effects of prone positioning depend on frames <i>Laura H. Ferguson, MD and Shawn T. Beaman, MD</i>	389
93	Cardiac output measurement: do you really understand the underlying principles? <i>Valerie Sera, DDS, MD and Matthew Caldwell, MD</i>	393
94	Infusion pumps: great technology when it works <i>Stephen T. Robinson, MD and Richard Botney, MD</i>	400
	Behind the scenes:	
95	Scavenging waste gases benefits the staff but may harm the patient <i>Terrence L. Trentman, MD</i>	405
96	Carbon dioxide absorbers save gas and moisture but create the potential for mechanical hazards, chemical soup, or a thermal disaster <i>Michael Axley, MD, MS and Stephen T. Robinson, MD</i>	410
97	Do not use your cell phone in the operating room <i>Grant T. Cravens, MD and Juraj Sprung, MD, PhD</i>	415
98	Remember that the line isolation monitor is based on a simple principle of electrical safety: make sure the patient does not become part of a grounded circuit <i>Jeffrey D. Dillon, MD, Richard Botney, MD, and Randal O. Dull, MD, PhD</i>	419
	REGIONAL ANESTHESIA	424
	Before You Begin:	
99	Complications of regional anesthesia: don't touch the needle until you know them <i>David A. Burns, MD</i>	426
100	Know the facts and be ready with an answer when a patient who will receive spinal anesthesia asks "Can this paralyze me?" <i>Angela M. Pennell, MD</i>	431
101	Remember the low-risk and high-yield blocks <i>Jennifer Vookles, MD, MA</i>	435
	Doing the block:	
102	Consider the paramedian approach for spinal anesthetic placement if the patient is in the lateral position <i>Catherine Marcucci, MD and Moustafa M. Ahmed, MD, MBCh</i>	439

103	Consider the paramedian approach for thoracic epidural placement, especially at the midthoracic level <i>Amit Sharma, MD</i>	441
104	Incorporate ultrasound guidance for peripheral nerve blockade into your practice <i>Michael Aziz, MD and Jean-Louis Horn, MD</i>	447
105	Do not overlook the “old-fashioned” Bier block, but beware of the speedy surgeon! <i>Surjya Sen, MD and Michael W. Barts, CRNA, BSAnesth, AAAPM</i>	451
106	Consider an epidural anesthetic as an adjunctive or primary technique for patients having mastectomy <i>Jennifer Vookles, MD, MA</i>	456
107	Consider continuous paravertebral block as your primary analgesic technique <i>Bruce Ben-David, MD</i>	458
	After the block:	
108	Wet tap? What now? <i>David Y. Kim, MD, Ihab R. Kamel, MD, and Rodger Barnette, MD, FCCM</i>	463
109	A patient under regional anesthesia who suddenly cannot speak above a whisper has a high block until proven otherwise <i>Ryan J. Bortolon, MD and Juraj Sprung, MD, PhD</i>	468
110	Consider lipid emulsion rescue for local anesthetic overdose <i>Heath A. Fallin, MD and David A. Burns, MD</i>	473
	PACU	480
111	Remember that postoperative pain management should be started preoperatively <i>J. Todd Hobelmann, MD</i>	482
112	Seek out hypercapnea in the PACU and remember that an acceptable pulse oximeter reading is not assurance of adequate ventilation <i>Michael P. Hutchens, MD, MA</i>	486
113	Consider acupuncture as an adjunct for the prophylaxis and treatment of postoperative nausea and vomiting <i>Leena Mathew, MD</i>	489
114	Never delay in responding to a call from the PACU about an eye complaint <i>Anagh Vora, MD</i>	495
115	Be aware of the issues and criteria pertaining to discharge of the post-spinal patient <i>Erik A. Cooper, DO and Li Meng, MD, MPH</i>	501

PEDIATRIC ANESTHESIA	508
Basics:	
116 Fasting guidelines for children should be simple but not too simple <i>Justin B. Hauser, MD</i>	510
117 Do not automatically cancel the procedure if a child has a runny nose <i>Ann G. Bailey, MD</i>	514
118 Put some thought into which child, and with which drug, you premedicate <i>M. Concetta DeCaria, MD</i>	517
119 Parents are present in the operating room by invitation of the anesthesiologist only <i>Juanita P. Edwards, MD, MS and Robert D. Valley, MD</i>	521
120 Pay scrupulous attention to eliminating air bubbles in pediatric intravenous tubing <i>Erica P. Lin, MD</i>	525
121 In children, improper placement, use, and maintenance of vascular access can result in serious morbidity and even mortality <i>Angela Kendrick, MD</i>	528
122 Always make sure you see the intubation and airway equipment you plan to use and the equipment you think you might use <i>Eugene E. Lee, MD</i>	533
123 Always expect and be prepared to treat hypoxemia during the induction and emergence of a pediatric patient <i>Michael J. Stella, MD</i>	537
124 The pediatric airway is a scary repository for all kinds of foreign bodies <i>Janey P. McGee, MD and Robert D. Valley, MD</i>	540
125 Effective epidural anesthesia for children does not always require a catheter <i>Dennis Yun, MD and Robert D. Valley, MD</i>	543
126 Keeping babies warm in the perioperative period is important, challenging, and, at times dangerous! <i>Kathleen A. Smith, MD</i> ..	546
127 Focus on prevention and treatment of emergence delirium <i>Warren K. Eng, MD and Robert D. Valley, MD</i>	549
128 Remember that babies really do feel pain <i>Angela Kendrick, MD</i>	552
129 Don't let the surgeons discharge every pediatric patient! <i>Peggy P. Dietrich, MD and Robert D. Valley, MD</i>	559

Special issues:

- 130 Recognize predictors and patterns of cardiac arrest in the anesthetized child *Kirk Lalwani, MD, FRCA* 562
- 131 Clinicians cannot rely solely on the legal doctrine of *parens patriae* when providing care for minors who are Jehovah's Witnesses
Anne T. Lunney, MD..... 568

NEUROANESTHESIA 573

Basics:

- 132 The neurophysiology you learned in medical school really does matter during craniotomies *Jennifer J. Adams, MD and Laurel E. Moore, MD*..... 574
- 133 Anesthetic goals for cerebral aneurysm are not the same as for routine craniotomy *James S. DeMeester, MD*..... 579
- 134 Evoked potentials: don't approach the surgeon and neurophysiologist until you know these principles
Alan C. Finley, MD, Anthony Passannante, MD, and Laurel E. Moore, MD..... 582

Intraoperative management:

- 135 Don't treat hypertension in neurosurgery cases before considering the cause(s) and risks, and always recognize that an abrupt change in the patient's blood pressure needs to be investigated *John S. Marvel, DO*..... 587
- 136 Awake craniotomy can be done humanely *Alexis Bilbo, MD and Laurel E. Moore, MD*..... 591
- 137 Don't be caught unprepared for a wake-up test
Sarah Merritt, MD, Peter Rock, MD, MBA, and Laurel E. Moore, MD..... 596
- 138 Remember that loss of vision is one of the most feared and devastating complications of spine surgery
Laurel E. Moore, MD..... 599

CARDIAC ANESTHESIA 605

Basics:

- 139 Cannulation for cardiopulmonary bypass—be careful where you point that thing! *Jason Z. Qu, MD and Edwin G. Avery, IV, MD*..... 606

- 140** Remember to ask about a history of esophageal disease if transesophageal echocardiography is planned (or possible)
Thomas R. Elsass, MD and Robert W. Kyle, DO..... 611
- 141** Remember that it is not possible to completely avoid myocardial ischemia associated with cardiopulmonary bypass and the delivery of cardioplegia—the goal is to minimize it
Amy C. Lu, MD, MPH and Giora Landesberg, MD, DSc, MBA..... 614
- 142** On the cusp of disaster: distinguish between the anesthetic management of stenotic and regurgitant cardiac valves
George A. Mashour, MD, PhD and Theodore A. Alston, MD, PhD..... 618
- 143** Antifibrinolytic agents: spare the clot but spoil the thrombus
Ala Nozari, MD, PhD and Theodore A. Alston, MD, PhD..... 622
- 144** The downside of anesthesia for the descending thoracic aorta: just about all the anesthetic issues are of paramount importance!
Edwin G. Avery, IV, MD and David A. Shaff, MD..... 626
- 145** Anesthesia for ascending aortic dissection: it's like walking on eggshells for the anesthesiologist
James F. Dana, MD and Edwin G. Avery, IV, MD..... 630
- Special issues:**
- 146** FREEZE—you're under deep hypothermic circulatory arrest!
Stephen R. Barone, MD and Michael G. Fitzsimons, MD..... 636
- 147** Remember that anesthesia for left ventricular assist device surgery is especially challenging: do not neglect these essential principles
Mark Chrostowski, MD and Giora Landesberg, MD, DSc, MBA..... 640
- 148** Off-pump cardiac surgery: What do you mean no pump break for the anesthesiologist?
Biswajit Ghosh, MD and Vipin Mehta, MBBS, MD, DARCS, FFARCSI..... 644
- 149** Coagulopathy in the cardiac surgical patient—it's not just about the numbers
Joby Chandy, MD and Edwin G. Avery, IV, MD..... 650
- 150** Remember there are specific do's and don'ts of anesthesia care for hypertrophic obstructive cardiomyopathy
Cosmin Gauran, MD and Edward George, MD, PhD..... 654

OB ANESTHESIA	659
"Routine" labor and delivery:	
151 Managing guests on the labor deck requires clear communication consistently, firmness when necessary, and calmness always <i>Christopher E. Swide, MD</i>	660
152 "I want my epidural now!" The effects of epidural analgesia on progress of labor and delivery <i>Patrick G. Bakke, MD and Jessica Cozzens, MD, MPH</i>	664
153 If carefully selected, patients in labor can ambulate safely—the key is the use of low-dose epidural analgesia <i>Christopher M. Colville, MD and Christopher E. Swide, MD</i>	666
154 Nothing by mouth guidelines during labor—"Can I please just have some water?" <i>Patrick G. Bakke, MD</i>	669
155 Be prepared for the presence of a doula in both the labor and delivery room <i>Christopher E. Swide, MD</i>	672
156 Urgent cesarean section: what's good for baby is good for mommy? <i>Nathan J. Hess, DO and Karen Hand, MD</i>	674
157 Pain control after cesarean section—"how can I take care of my baby if I just had surgery?" <i>Patrick G. Bakke, MD</i>	680
Special issues:	
158 Be aware of the consequences of aortocaval compression and the supine hypotensive syndrome when caring for a pregnant patient <i>Thomas M. Chalifoux, MD and Ryan C. Romeo, MD</i>	683
159 Headaches and hypertension: management of pre-eclampsia in the obese patient <i>Patrick G. Bakke, MD</i>	687
160 Acupuncture has significant efficacy for the treatment of the pregnant or laboring patient <i>Leena Mathew, MD</i>	691
161 Always be prepared for emergent delivery as a consequence of external cephalic version <i>Angela M. Pennell, MD</i>	698
162 Obstetric anesthesia/analgesia can work in a small hospital: the key principles are commitment, flexibility, and planning <i>James S. Hicks, MD, MM</i>	701
163 Remember that anesthesia for the pregnant patient having non-obstetric surgery is not limited to any particular agents or techniques <i>L. Michele Noles, MD</i>	705

PAIN MEDICINE	711
Perioperative management:	
164 Do not guess at the equivalent dose when determining an opioid conversion <i>Amit Sharma, MD</i>	712
165 Consider discussing the use of ketorolac (toradol) with your surgical team before the need arises <i>Amit Sharma, MD</i>	720
166 The basal infusion mode in patient-controlled analgesia is both friend and foe <i>Amit Sharma, MD</i>	725
167 Management of perioperative pain in opioid dependent patient—out of the frying pan, into the fire <i>Amit Sharma, MD</i>	732
168 Do patients with congenital insensitivity to pain need anesthetics and postoperative opioids? <i>Katarina Bojanic, MD, Toby N. Weingarten, MD, and Juraj Sprung, MD, PhD</i>	736
Chronic pain:	
169 Rule out facet arthropathy before initiating expensive and invasive maneuvers for back and spine pain <i>Amit Sharma, MD</i>	741
170 When evaluating back pain, always examine for trigger points before ordering expensive imaging studies <i>Leena Mathew, MD</i>	748
171 Know the complications of epidural corticosteroid injections <i>Anne E. Ptaszynski, MD and Toby N. Weingarten, MD</i>	753
172 Chemical neurolysis has good efficacy in the treatment of intractable and terminal cancer pain, but precise administration of the appropriate anesthetic and lytic agents is imperative <i>Leena Mathew, MD</i>	758
HUMAN FACTORS	765
173 Understanding the human factors <i>F. Jacob Seagull, PhD</i>	766
Do's:	
174 Learn from the pilots to minimize errors in anesthesia management: recognition and prevention <i>Stephen J. Gleich, BS (MSIII) and Juraj Sprung, MD, PhD</i>	769
175 In a noisy operating room, use a “spelling alphabet” to communicate the patient’s name or check in blood products <i>Catherine Marcucci, MD, Daniel T. Murray, CRNA, and F. Jacob Seagull, PhD</i>	773

- 176** Know when to stop—patients can be seriously injured not because the anesthesia providers can't do something but because they can't stop trying *F. Jacob Seagull, PhD and Catherine Marcucci, MD*..... 776
- 177** Folklore can be a powerful ally—share stories and don't forget to listen
F. Jacob Seagull, PhD, Deborah Dlugose, RN, CCRN, CRNA, and Catherine Marcucci, MD..... 778
- Don'ts:**
- 178** Don't ignore your intuition *F. Jacob Seagull, PhD and Catherine Marcucci, MD*..... 782
- 179** Do not rely on rote memorization of contraindications
Erik S. Eckman, MD, Peter Rock, MD, MBA, and F. Jacob Seagull, PhD..... 785
- 180** Be aware of the interface between spirituality and the practice of medicine and never interrupt the chaplain
Angela C. Wooditch, MD and Joseph F. Talarico, DO..... 789
- LEGAL**..... 795
- 181** How not to end up in a closed claims file: lessons learned from the ASA Closed Claims Project *Lorri A. Lee, MD and Karen B. Domino, MD, MPH*..... 796
- 182** Refusal to do a case on moral or ethical grounds: practical navigation of very troubled waters *Kenneth R. Abbey, MD, JD and Marcus C. Stepaniak, CRNA, MS, BSN*..... 804
- 183** Get informed about “informed consent”
Lynn A. Fenton, MD..... 809
- 184** The anesthesia record is a legal document
Joseph F. Talarico, DO, David G. Metro, MD, and Renee A. Metal, JD..... 813
- 185** Reading in the operating room—is it worth the risk?
Michael Axley, MD, MS..... 820
- 186** Adequate treatment of pain is both an ethical and a legal obligation. Treat severe pain scores like unstable vital signs: quickly and decisively *Kenneth R. Abbey, MD, JD*..... 824

187	Handle dental injuries like you handle teeth, with care <i>Douglas W. Anderson, DMD and Kenneth R. Abbey, MD, JD</i>	828
188	“Do Not Resuscitate” orders are not automatically suspended in the operating room <i>Kirk Lalwani, MD, FRCA and Vincent K. Lew, BA (MSII)</i>	832
189	Invoke <i>parens patriae</i> to provide safe medical care to a child when the parents can’t or won’t consent <i>Anne T. Lunney, MD</i>	836
PROFESSIONAL PRACTICE		841
Basics:		
190	Don’t ask the operating room nurse to be a supply technician, secretary, or mediator <i>Catherine Marcucci, MD, Ralph DiRado, RN, and Pamela D. Nichols, RN</i>	842
191	Do not allow your Advanced Cardiac Life Support (ACLS) certification to lapse <i>Lisa Marcucci, MD and Surjya Sen, MD</i> ..	844
192	Do not ask a family member to translate or assist with procedures <i>Randal O. Dull, MD, PhD</i>	846
193	Take steps to safeguard yourself if you are pregnant, but try not to worry excessively <i>Angela Zimmerman, MD</i>	849
194	Know what the basic statistical terms mean <i>Peter F. Cronholm, MD, MSCE and Joseph B. Straton, MD, MSCE</i>	852
Always Avoid the Bad Jobs:		
195	Always avoid the bad jobs—know the advantages and disadvantages of the different types of practices <i>Norman A. Cohen, MD</i>	858
196	Always avoid the bad jobs—know yourself <i>Norman A. Cohen, MD</i>	864
197	Always avoid the bad jobs—know how to assess a practice <i>Norman A. Cohen, MD</i>	866
198	Always avoid the bad jobs—understanding solo practice and the basics of medical practice finance and legal organization <i>Norman A. Cohen, MD</i>	876
199	Always avoid the bad jobs—specific considerations for a group practice <i>Norman A. Cohen, MD</i>	880

200	Always avoid the bad jobs—make sure you understand the compliance plan <i>Norman A. Cohen, MD</i>	885
201	Always avoid the bad jobs—know the risk-management strategies of the practice <i>Norman A. Cohen, MD</i>	889
202	Always avoid the bad jobs—review the practice's special funding sources, obligations, and benefit packages <i>Norman A. Cohen, MD</i>	891
203	Always avoid the bad jobs—know what to expect in contracts <i>Norman A. Cohen, MD</i>	894
CODING AND PAYMENT—MAKE SURE YOU GET PAID		899
204	Understanding medical coding and the healthcare payment system <i>Norman A. Cohen, MD</i>	900
205	The structure of medical codes <i>Norman A. Cohen, MD</i>	903
206	A detailed look at describing diagnoses using the International Classification of Diseases <i>Norman A. Cohen, MD</i>	905
207	A detailed look at procedure coding—Current Procedural Terminology, HCPCS, and ICD <i>Norman A. Cohen, MD</i>	909
208	Specific coding issues <i>Norman A. Cohen, MD</i>	915
209	Getting paid for anesthesia services <i>Norman A. Cohen, MD</i>	937
210	Medicare issues <i>Norman A. Cohen, MD</i>	943
211	What are the coding resources to help me code correctly? <i>Norman A. Cohen, MD</i>	950
212	Navigating a hazardous road <i>Norman A. Cohen, MD</i>	953
213	A brief look at Medicaid and anesthesia <i>Norman A. Cohen, MD</i>	967
214	A brief look at other payers <i>Norman A. Cohen, MD</i>	968
COMMENCEMENT		971
215	Respect in the operating room: be good.... no, be great <i>Grace L. Chien, MD and Tammily R. Carpenter, MD</i>	972
