Diagnostic Atlas of  
**GASTROESOPHAGEAL  
REFLUX DISEASE**

A NEW HISTOLOGY-BASED METHOD

**PARAKRAMA T. CHANDRASOMA**

About the Author	vii
Other Publications by the Author	ix
CHAPTER 1: REFLUX-INDUCED CANCER: AN EPIDEMIC WE NEED TO ADDRESS NOW	1
Epidemiology of Reflux-Induced Cancer	2
The Problem	6
The Reflux-to-Adenocarcinoma Sequence	10
Step 1: Squamous Epithelial Damage with Columnar Metaplasia	11
Step 2: Intestinal Metaplasia of Cardiac Mucosa	13
Step 3: Carcinogenesis in Intestinal Metaplasia	17
The Future Without Change	19
Can Reflux-Induced Adenocarcinoma Be Prevented?	22
Step 1: Squamous Epithelial Damage and Cardiac Metaplasia	24
Step 2: Intestinal Metaplasia of Cardiac Mucosa	24
Step 3: Carcinogenesis in Intestinal Metaplasia	25
Objections to Anti-Reflux Surgery	26
Cost	26
Surgical Mortality, Morbidity, and Failure	27
Feasibility	27
A Plea for an Aggressive Approach	27
Aggressively Understand Reflux Disease at a Histologic Level	28
Aggressively Assess the Cancer Risk in a Given Patient	28
Aggressively Seek Patients at Highest Risk	29
Aggressively Treat High-Risk Patients	31
Barrett Esophagus with High-Grade Dysplasia	31
Barrett Esophagus with Low-Grade Dysplasia or Without Dysplasia	32
Reflux Disease Without Barrett Esophagus	33
Expectation of Change	34
References	34
CHAPTER 2: THE PRESENT STATE OF DIAGNOSIS OF RELUX DISEASE	36
Presently Used Diagnostic Criteria of Reflux Disease	36
Symptom-Based Diagnosis	36
Diagnosis by Physiologic Testing	39

Endoscopic Diagnosis	41
Histologic Diagnosis	48
Columnar-Lined Esophagus: An Inexplicably Ignored Diagnostic Criterion for Reflux Disease	52
Universally Accepted Endoscopic Conclusions	53
Universally Accepted Histologic Conclusions	54
Recommended Changes to Present Diagnostic Criteria by Accepted Data	57
References	59
CHAPTER 3: HISTOLOGIC DEFINITION AND DIAGNOSIS OF EPITHELIAL TYPES IN THE ESOPHAGUS AND STOMACH	61
The Importance of Histology in Understanding Disease	61
Embryologic Development	61
The Fetal Esophagus	61
The Fetal Stomach	64
Histologic Definition of Epithelial Types in Postnatal Esophagus and Proximal Stomach	65
Stratified Squamous Epithelium	65
Columnar Epithelia	70
Basic Structure	70
Cell Types	73
Classification	77
Diagnosis of Columnar Epithelial Types	81
Gastric Oxyntic Mucosa	81
Cardiac Mucosa	85
Oxyntocardiac Mucosa	88
Case Study	89
Intestinal Metaplasia in Cardiac Mucosa	90
Application of Histologic Definitions	92
Problems in Differential Diagnosis Between Columnar Epithelial Types	93
Cardiac Mucosa with Pseudo-Goblet Cells Versus Intestinal Metaplasia in Cardiac Mucosa	95
Cardiac Mucosa Versus Oxyntocardiac Mucosa	97
Oxyntocardiac Versus Gastric Oxyntic Mucosa	98
Cardiac Mucosa Versus Normal Gastric Oxyntic Mucosa	99
Cardiac Mucosa Versus Atrophic Gastric Mucosa with Pseudo-Pyloric Metaplasia	99
Case Study	103
Intestinal Metaplasia in Cardiac Mucosa Versus Intestinal Metaplasia in Chronic Atrophic Gastritis Involving Gastric Oxyntic Mucosa	104
Case Study	109
References	111
CHAPTER 4: DEFINITION OF NORMAL AND REFLUX-INDUCED ANATOMY AND HISTOLOGY	112
Normal Anatomy	112
The Normal Esophagus	112
The Lower Esophageal Sphincter	114
The Normal Stomach: What Is the Gastric Cardia?	116

Normal Histology of the Esophagus and Proximal Stomach	119
Discrepancy Between the Anatomic Gastric Cardia and Cardiac Mucosa	120
The Importance of Precise Histologic Definitions	122
Definition of the Gastroesophageal Junction	123
Historical Background	123
Clinical Impact of Validated and Unvalidated Definitions of the Gastroesophageal Junction	127
Definition of the True Gastroesophageal Junction by Histology: The Proof	129
Pathogenesis of Reflux Disease	132
Reflux Versus Reflux Disease	132
The Mechanism of Gastroesophageal Reflux	133
The Dilated End-Stage Esophagus: The Earliest Stage of Reflux Disease	136
Visible Columnar-Lined Esophagus and Hiatal Hernia: The Later Stage of Reflux Disease	139
Anatomic Location and Significance of Epithelial Types: Resolution of Controversy	141
Squamous Epithelium	142
Gastric Oxyntic Mucosa	144
Cardiac Mucosa with and Without Intestinal Metaplasia and Oxyntocardiac Mucosa	144
Prevalence and Extent—Present Viewpoint	145
Prevalence and Extent—New Data in Autopsy Populations	149
Prevalence and Extent—Data from Clinical Populations	151
Significance of Cardiac Mucosa with and Without Intestinal Metaplasia and Oxyntocardiac Mucosa	152
New Definitions of the Normal State and Gastroesophageal Reflux Disease	154
References	154

CHAPTER 5: CELLULAR CHANGES OF NON-NEOPLASTIC GASTROESOPHAGEAL REFLUX DISEASE 157

Squamous Epithelial Injury	158
Sequence of Columnar Metaplasia of the Esophagus	158
Cardiac Metaplasia of Squamous Epithelium: The First Genetic Switch	158
Cardiac Mucosa to Intestinal Metaplasia: The Second Genetic Switch	163
Cardiac to Oxyntocardiac Mucosa: The Benign Genetic Switch	164
Distribution of Columnar Epithelial Types	165
Relationship Between Prevalence of Intestinal Metaplasia and Length of Columnar-Lined Esophagus	166
Historical Differences in Epithelial Composition of Columnar-Lined Esophagus	168
Mechanism of the Genetic Switches in Columnar-Lined Esophagus	170
Case Study	176
Reversibility of Genetic Switches	179
Barrett Esophagus: Five Decades of Medical Failure	180
References	182

CHAPTER 6: REFLUX-INDUCED ADENOCARCINOMA OF THE ESOPHAGUS	184
Case Study	184
The Target Cell	189
The Carcinogen	190
Salivary Nitrogenous Compounds	190
Acid	191
Case Study	191
Bile	194
Interaction Between Carcinogens and Target Cells	196
Case Study	198
Factors Associated with an Increased Cancer Risk in	
Gastroesophageal Reflux Disease	201
Symptomatic Reflux Disease	201
Demographic Factors	201
Clinical Evidence of Severity of Reflux Disease	202
Evidence of Duodenogastroesophageal Reflux	202
Barrett Esophagus	202
The Length of Barrett Esophagus	202
The Amount of Intestinal Metaplasia	204
The Proximity of the Intestinal Metaplasia to the Gastroesophageal Junction	204
The Proliferative Rate of the Target Cells	205
Acid-Suppressive Drug Therapy	205
Statistical Evidence of Increased Risk with Acid-Suppressive Drugs	205
Theoretical Considerations	206
Factors that Are Protective Against Development of Cancer in Barrett Esophagus	207
Decreasing Gastroesophageal Reflux	208
Ablation of Barrett Epithelium	209
Exclusion of Bile from the Refluxate	209
Assessment of Cancer Risk in Barrett Esophagus	210
Molecular Abnormalities	212
Dysplasia	213
Criteria for Diagnosis of Dysplasia	216
The Diagnosis of High-Grade Dysplasia	216
Criteria for Diagnosis of High-Grade Dysplasia	217
Criteria for Diagnosis of Low-Grade Dysplasia	222
Prevalent Cancer in Barrett Esophagus	225
High-Grade Dysplasia	227
High-Grade Dysplasia in a Lesion that Is Visible at Endoscopy	227
Multifocal Versus Unifocal High-Grade Dysplasia	228
Extensive (Multifocal and Multilevel) Low-Grade Dysplasia	228
Non-Dysplastic Barrett Esophagus	229
Conclusion	229
References	229
 CHAPTER 7: NEW HISTOLOGY-BASED DEFINITIONS AND METHOD OF DIAGNOSIS OF REFLUX DISEASE	 232
A New Histologic Definition of Gastroesophageal Reflux Disease	232
Reflux Carditis: The Perfect Definition of Gastroesophageal Reflux Disease	236
Definition of Reflux Carditis	237

Histologic Features of Reflux Carditis	238
Gross Pathologic and Endoscopic Features of Reflux Carditis	238
Clinical Features of Reflux Carditis	240
Reflux Carditis and the 24-Hour pH Test	241
Significance of Reflux Carditis	241
Differential Diagnosis of Reflux Carditis	242
A New Definition of Barrett Esophagus	242
Case Study	245
A New Diagnostic Method for Reflux Disease	249
Protocols for Histologic Assessment	249
Biopsy Protocol for Patients Who Are Endoscopically Normal	250
Biopsy Protocol for Patients with a Visible Columnar-Lined Esophagus	251
Quick Biopsy Protocol for the Busy Gastroenterologist	252
Biopsy Protocol for Barrett Surveillance	253
Biopsy Protocol for the Patient with a Mass Lesion	253
Protocol for Dissecting an Esophagectomy Specimen	255
Data Generated by Histologic Assessment	257
Interpretation of the Data	260
Does the Patient Have Evidence of Reflux-Induced Cellular Change?	261
Does the Patient Have Reflux Disease?	263
Case Study	264
What Is the Severity of Reflux Disease in the Patient?	267
What Is the Risk of Cancer in These Patients?	268
A Classification Based on the Cellular Status as It Relates to Gastroesophageal Reflux	272
Assessment of Treatment of Gastroesophageal Reflux Disease	274
Effect of Acid-Suppressive Drug Therapy	280
Effect of Mucosal Ablation	281
Effect of Anti-Reflux Surgery	282
Decrease in the Incidence of High-Grade Dysplasia and Adenocarcinoma	282
Reversal of Intestinal Metaplasia	283
Case Study	284
Prevention of Conversion of Cardiac Mucosa to Intestinal Metaplasia	287
Conversion of Cardiac Mucosa to Oxyntocardiac Mucosa	287
References	289
Index	291
