Preface      xiii

Chapter 1. INTRODUCTION    1

    Physiology    1

        Membrane Physiology    1

        Generators of EEG Potentials    3

    Generation of Abnormal EEG Activity    4

        Attenuation    4

        Slow Activity    5

        Epileptiform Activity    6

Chapter 2. EEG TECHNOLOGY AND MONTAGES    9

    Electrodes    9

        Electrode Basics    9

        Electrode Placement    9

        Electrode Application    16

    Routine EEG    17

        Rules of Polarity    17

        Montages    18

        Recording Parameters    21

        Recording Procedures    22

    Video Monitoring    26

        Montages    26

        Recording Procedures    27

Chapter 3. MONTAGES AND LOCALIZATION    29

    Referential Montages    29

        Localization in Referential Montage    30

    Bipolar Montages    30

        Localization of Potentials in a Bipolar Montage    31

    Montage Localization Examples    33

Chapter 4. EEG ANALYSIS    39

    Terminology    39

    Basic EEG Analysis    47

Fundamental Frequency Bands	47
Transients	48
Clinical Analysis and Interpretation	52
Review of Routine EEG	52
Review of Video EEG	53
Guidelines to Clinical Interpretation	53
Chapter 5. NORMAL ROUTINE EEG	57
Adult	57
Waking	57
Drowsiness	59
Sleeping	60
Children	62
Waking	62
Drowsiness	64
Sleeping	64
Activation Methods	65
Photic Stimulation	65
Hyperventilation	69
Sleep Deprivation	71
Normal EEG Patterns and Variants	71
Waking and Drowsiness	71
Sleeping	79
Non-Cerebral Potentials	82
Eye Movement	82
Muscle Artifact	89
Glossokinetic Artifact	92
Nonphysiologic Electrical Artifact	93
Chapter 6. ABNORMAL EEG: NON-EPILEPTIFORM ABNORMALITIES	99
Types of Abnormalities	99
Slow Activity	99
Focal Slow Activity	99
Generalized Asynchronous Slow Activity	101
Generalized or Regional Bisynchronous Slow Activity	103
Attenuation/Suppression	105
Focal Attenuation	105
Generalized Attenuation/Suppression	106
Isoelectric EEG	108
Focal Increase in EEG Activity	109

Generalized Increase in EEG Activity	110
Excessive Fast Activity	110
Excessive Slow Activity	111
Periodic Patterns	111
Periodic Lateralized Epileptiform Discharges (PLEDs)	111
Generalized Periodic Discharges	113
Burst-Suppression Pattern	115
Other Non-Epileptiform Abnormalities	117
EEG Patterns with Selected Specific Conditions	119
Herpes Simplex Encephalitis	119
Stroke	119
Alzheimer's Disease	120
Creutzfeldt-Jakob Disease	121
Hypoxic-ischemic Encephalopathy	122
Chapter 7. ABNORMAL EEG: THE EEG IN EPILEPSY	125
Role in Diagnosis and Management	125
Steps in the EEG Analysis in Patients with Suspected Epilepsy	126
Discharges Associated with Epilepsy	126
Epileptiform Discharges	126
Ictal versus Interictal Epileptiform Discharges	128
Specific EEG Patterns in Patients with Epilepsy	131
Focal Spikes and Sharp Waves	131
3 Hz Generalized Spike-and-Wave Discharges	135
Slow Spike-and-Wave Discharges	137
Fast Spike-and-Wave Discharges	138
Hypsarrhythmia	138
Focal Ictal Discharges	139
Temporal Intermittent Rhythmic Delta Activity (TIRDA)	141
Patterns of EEG Activity in Certain Forms of Epilepsy	142
Temporal Lobe Epilepsy	142
Posterior Temporal Lobe Epilepsy	146
Frontal Lobe Epilepsy	148
Occipital and Parietal Lobe Epilepsies	153
Benign Rolandic Epilepsy	154
Benign Epilepsy with Occipital Paroxysms	157
Childhood Absence Epilepsy	158
Juvenile Absence Epilepsy	159
Juvenile Myoclonic Epilepsy	160
Lennox-Gastaut Syndrome	161

EEG with Specific Seizure Types	162
Simple Partial Seizures	162
Complex Partial Seizures	163
Secondarily Generalized Tonic-Clonic Seizures	165
Generalized Absence Seizures	167
Generalized Atypical Absence Seizures	168
Generalized Myoclonic Seizures	168
Generalized Tonic Seizures	169
Generalized Atonic Seizures	170
Infantile Spasm	172
Generalized Tonic-Clonic Seizures	173
Limitation of Routine EEG in Epilepsy	174
The EEG Predictive Value	175
Prediction of Recurrence after First Seizure	175
Prediction of Seizure Recurrence after Medication Withdrawal	175
Specificity of the EEG	175

Chapter 8. VIDEO EEG 177

Prolonged Video-EEG Monitoring	177
Clinical Indications for Video-EEG	177
Video EEG Monitoring Choices	179
Inpatient Long-Term Video-EEG Monitoring	179
Repeated Admissions	180
Goals of Monitoring	181
Monitoring for Presurgical Localization	181
Monitoring for Differentiation of Epileptic from Non-epileptic Spells	181
Monitoring for Classification of Seizure Type	182
Baseline EEG Recording	182
Provocation of Events	182
Provocation of Non-epileptic Seizures	182
Precipitation of Epileptic Seizures	184
End of the Study	184
When Should the Study End?	184
Medications Upon Discharge	184
Short-term Video-EEG Monitoring	185
Ambulatory Video-EEG Monitoring	185
Special Electrodes	186
10-10 System	186

---

Nasopharyngeal Electrodes	186
Sphenoidal Electrodes	185
Supraorbital Electrodes	187
Nasoethmoidal Electrodes	188
Review of Video-EEG Studies	188
Filtering	189
Montages	189
Video-EEG Diagnosis of Psychogenic Seizures	189
Testing Patients During Events	190
Testing During Discharges Precipitated by Hyperventilation	191
Chapter 9. SEIZURE SEMIOLOGY AND DIFFERENTIAL DIAGNOSIS	193
Seizure Classification	193
Partial Seizure Type	194
Generalized Seizure Types	202
Pseudoseizures (nonepileptic psychogenic seizures)	205
Clinical Presentations	205
APPENDIX	
Readings	209
